

First of all my favourite experience all over these years was the exchange to Germany, with the students from Grimma.

I liked a lot of things about that activity: travelling to another country, visiting monuments, learning some words in German... But above all of it meeting new people was the most important for me. The adrenalin before getting in the plane and the happiness that I felt when we arrived to Grimma are feelings that I'll never forget. I got a lot from this experience, I had made a lifelong friend and I'm so thankful for it.

The Canterville ghost play was so fun to do, I think it was a great activity to make us lose the fear to speak English in public and we also had a good time so I don't really remember anything bad from this project.

I remember the Photo Contest that we made in 2017, it was an amazing and creative way to make us focus in our own work.

The last activity that I chose is the laboratory practice in which we dissected a pig's heart. I really enjoyed it because it was a different way to study and learn biology and I'm really interested on it, so it was a truly enriching experience.

To sum up, this program benefits the whole high school and the students, you have a better level of English and you learn through different interactive activities. I would recommend it to every student because I think the languages open doors in life.
